## GPS LNA-Filter Front-End Module

**AVAGO**  
TECHNOLOGIES

### Data Sheet

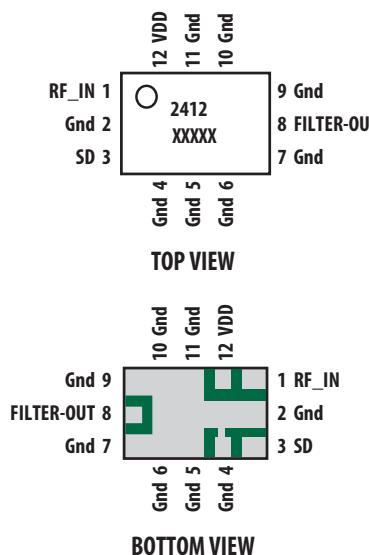

#### Description

Avago Technologies' ALM-2412 is an LNA module, with integrated filter, designed for GPS band applications at 1.575GHz. The LNA uses Avago Technologies' proprietary GaAs Enhancement-mode pHEMT process to achieve high gain with very low noise figure and high linearity. Noise figure distribution is very tightly controlled. A CMOS-compatible shutdown pin is included either for turning the LNA on/off, or for current adjustment. The integrated filter utilizes an Avago Technologies' leading-edge FBAR filter for exceptional rejection at Cell/PCS-Band frequencies.

The ALM-2412 is useable down to 1V operation. It achieves low noise figure, high gain and linearity even at 1V, making it suitable for use in critical low-power GPS applications or during low-battery situations.

#### Note:

Package marking provides orientation and identification  
"2412" = Product Code  
First "X" = Year of manufacture  
Second "X" = Work week of manufacture  
Third "X" = Datecode  
Fourth & Fifth "X" = Lot Number

#### Features

- Very Low Noise Figure : 0.85 dB typical
- High Gain : 13.5 dB typical
- High IIP3 and IP1dB
- Exceptional Cell/PCS-Band rejection
- Advanced GaAs E-pHEMT Technology
- Low external component count
- Wide Supply Voltage : 1V to 3.6V
- Shutdown current : < 0.1uA
- CMOS compatible shutdown pin (SD) current @ 2.8V : 0.1mA
- Adjustable current via single external resistor/voltage
- Meets MSL3, Lead-Free and Halogen-Free
- ESD-protected RF input: 3kV HBM
- Small package dimension: 3.3(L)x2.1(W)x1.1(H) mm<sup>3</sup>

#### Specifications (Typical performance at 25°C)

At 1.575GHz, Vdd = 2.85V, Idd = 9.0mA

- Gain = 13.5 dB
- NF = 0.85 dB
- IIP3 = +6.1 dBm, IP1dB = +2.2 dBm
- S11 = -8.4 dB, S22 = -9.0 dB
- Cell-Band Rejection: 53dBc
- PCS-Band Rejection: 65dBc

At 1.575GHz, 1.0V supply

- S21 = 7.2dB
- NF = 1.63dB
- Idd = 1.5mA

#### Application

- GPS Band LNA

**Attention: Observe precautions for handling electrostatic sensitive devices.**

For RF\_IN (Pin 1): ESD Human Body Model = 3 kV

All other pins: ESD Machine Model = 40 V

ESD Human Body Model = 300 V

**Figure 2. Demoboard and application schematic diagram**

Notes:

- The demoboard of Figure 6 is Rogers® RO4350 with typical  $Dk = 3.48$  (@10GHz).
- L3 and the module's internal input pre-match form the input matching network. The module has built-in DC-blocking capacitors at the input and output.
- This circuit demonstrates that very low noise figure is obtainable with standard 0402 chip inductors instead of high-Q wirewound inductors.
- C2 and L2 form a matching network at the output of the LNA stage, which can be tuned to optimize gain and return loss. For example, higher gain can be obtained by increasing the value of C2 but at the expense of stability. Changing the value of L2 can improve the PCS rejection, but impacts output return loss.
- L1 is a choke which isolates the demoboard from external disturbances during measurement. It is not needed in actual application. Likewise, C1 and C3 mitigate the effect of external noise pickup on the Vdd and SD lines respectively. These components are not required in actual operation.
- R1 is a stability-enhancing resistor.
- C9 is a DC-blocking capacitor. It is also not required in actual operation.
- Bias control is achieved by either varying the SD voltage with/ without R2, or fixing the SD voltage to Vdd and adjusting R2 for the desired current. Typical value for R2 is 10k Ohms for 9mA total current at  $Vdd = 2.85V$  and  $Vsd = +2.60V$ . For applications where it is more appropriate to have SD ( $Vsd$ ) connected to Vdd, an 18k Ohms resistor value for R2 is suggested (where  $Vdd = 2.85V$ ).
- For low-voltage operation such as  $Vdd = 1.5V$  or  $1.0V$ , R2 may be omitted and SD ( $Vsd$ ) connected directly to Vdd.
- The grounding regime for the ALM-2412 is critical to achieving the PCS- and Cell-Band Rejections shown in Figure 9. Please refer to the PCB Land Patterns section of this document for the exact locations of the grounding vias.

### **ALM-2412 Typical Noise Parameter at 25°C, Freq = 1.575GHz, Vdd = 2.85V, Idd = 9mA**

<b>Freq</b>	<b>Fmin</b>	<b>GAMMA OPT</b>		
(GHz)	(dB)	Mag	Ang	Rn/50
1.575	0.7	0.55	62	0.36

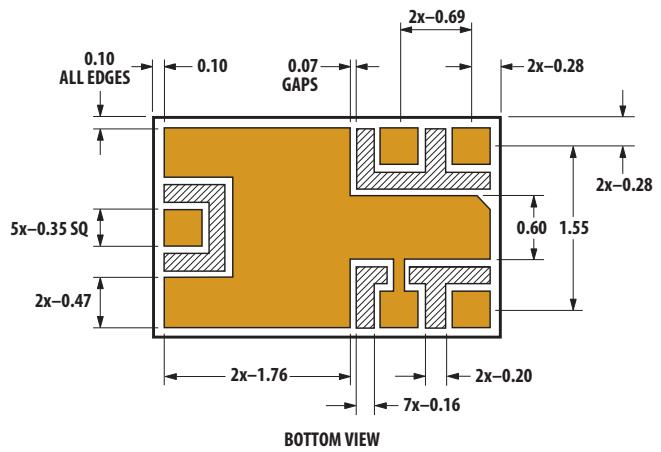

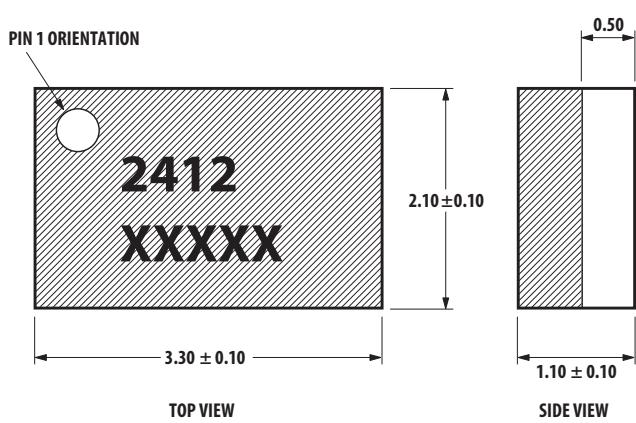

## **Part Number Ordering Information**

Part Number	No. of Devices	Container
ALM-2412-BLK	100	Antistatic Bag
ALM-2412-TR1G	3000	13" Reel

## Notes:

- The exceptional noise figure performance of the ALM-2412 is due to its highly optimized design. In this regard, the Fmin of the ALM-2412 shown above is locked down by the internal input pre-match. This allows the use of relatively inexpensive chip inductors for external matching.
  - The NF performance of the ALM-2412 is also very resilient to operating conditions. For example, at  $I_{DD} = 5\text{mA}$ , the degradation in NF is only  $0.1\text{dB}$ , and not more than  $0.15\text{dB}$  degradation over temperature.

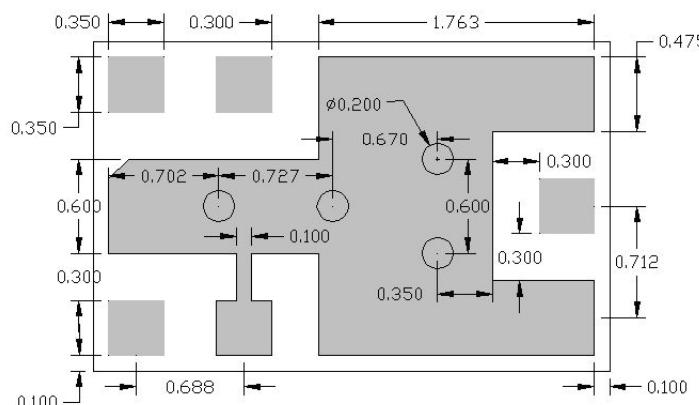

## Package Dimensions

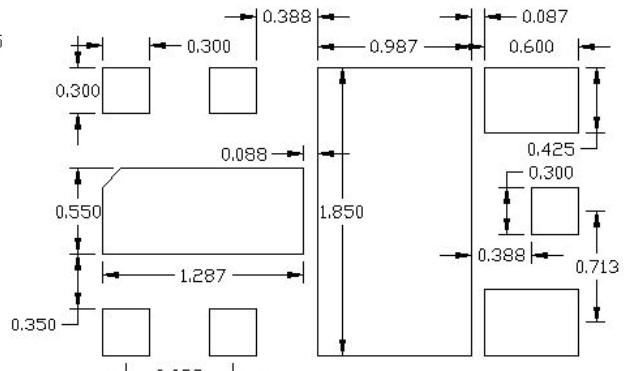

**NOTES:**

1. ALL DIMENSIONS ARE IN MILLIMETERS.
  2. DIMENSIONS ARE INCLUSIVE OF PLATING.
  3. DIMENSIONS ARE EXCLUSIVE OF MOLD FLASH AND METAL BURR.

- NOTES:**
1. MEASURE FROM CENTER LINE OF SPROCKET HOLE TO CENTER LINE OF POCKET.
  2. MEASURE FROM CENTER LINE OF POCKET HOLE TO CENTER LINE OF POCKET.
  3. PITCH TOLERANCE FOR SPROCKET HOLE: 10 PITCH CUMULATIVE TOLERANCE IS  $\pm 0.2$  mm.
  4. ALLOWABLE CAMBER TO BE 1 mm PER 250 mm IN LENGTH.
