**POWER PhotoMOS RELAYS
with Internal Varistor**

PhotoMOS RELAYS

FEATURES

1. Power PhotoMOS relay with internal varistor

An internal varistor on the output side protects the output MOSFET from the reverse voltage from an external voltage surge or inductive load.

2. High capacity PhotoMOS relay

Supports control of minute loads to a maximum 3.0 A. Suitable for output control.

3. Supports both AC and DC

Bi-directional control so there is no need to differentiate according to the load as in conventional SSR's.

4. Can be placed on-board the 4-unit relay (power photoMOS relay type)

5. Ideal for inductive loads

Ideal for inductive loads such as motors, solenoids, and electro-magnetic contactors.

6. High sensitivity, low ON resistance

Can control a maximum 3.0 A load with a 5 mA input current. Low On resistance of 0.18 Ω (AQZ202V).

7. Compact slim-type 4-pin SIL

(W) 3.5x(L) 21.0x(H) 12.5 mm (W) .138x(L) .827x(H) .492 inch . The compact 73.5mm² size of the 4-pin SIL package allows high density mounting.

8. Sockets also available

9. Promoting the CE making
