

# **Cree<sup>®</sup> XLamp<sup>®</sup> ML-E LEDs**

CREE

## **PRODUCT DESCRIPTION**

The Cree XLamp ML-E LED brings lighting-class reliability and performance to 1/2-watt LEDs. The XLamp ML-E expands Cree's lighting-class leadership to LED bulbs and linear and distributed lighting applications. With XLamp lighting-class reliability, a wide viewina angle, uniform liaht output, and industry-leading chromaticity binning in a 3.5-mm X 3.5-mm package, the XLamp ML-E LED continues Cree's history segment-focused of product innovation in LEDs for lighting applications.

The XLamp ML-E LED brings high performance and a smooth look to a wide range of lighting applications, including linear lighting, LED light bulbs, fluorescent retrofits and retail-display lighting.

#### **FEATURES**

- Available in white (2600 K to 8300 K CCT), 80-, 85- and 90-CRI minimum
- Available in royal blue, blue, green, amber and red
- Available in parallel and series
  Vf configurations for white
- ANSI-compatible sub-bins
- Maximum drive current: 500 mA for parallel white, 167 mA for series white, 350 mA for blue, green and red, 250 mA for amber
- 120° viewing angle for white, 125° viewing angle for color
- Uniform chromaticity profile
- Electrically neutral thermal path
- RoHS- and REACh-compliant
- UL-recognized component (E349212)

# CHARACTERISTICS (T<sub>1</sub> = 25 °C)

Characteristics	Unit	Minimum	Typical	Maximum
Thermal resistance, junction to solder point - white, royal blue, blue	°C/W		11	
Thermal resistance, junction to solder point - green, red	°C/W		15	
Thermal resistance, junction to solder point - amber	°C/W		24	
Viewing angle (FWHM) - white	degrees		120	
Viewing angle (FWHM) - royal blue, blue, green, amber, red	degrees		125	
Temperature coefficient of voltage - parallel - white	mV/°C		-3.3	
Temperature coefficient of voltage - series - white	mV/°C		-10	
Temperature coefficient of voltage - royal blue, blue	mV/°C		-3.3	
Temperature coefficient of voltage - green	mV/°C		-4	
Temperature coefficient of voltage - red	mV/°C		-1.8	
Temperature coefficient of voltage - amber	mV/°C		-1	
ESD classification (HBM per Mil-Std-883D)			Class 2	
DC forward current - parallel - white	mA			500
DC forward current - series - white	mA			167
DC forward current - royal blue, blue, green, red	mA			350
DC forward current - amber	mA			250
Reverse voltage	V			-5
Forward voltage (@ 150 mA) - parallel - white	V		3.2	3.4
Forward voltage (@ 50 mA) - series - white	V		9.6	10.2
Forward voltage (@ 150 mA) - royal blue, blue	V		3.2	
Forward voltage (@ 150 mA) - green	V		3.45	
Forward voltage (@ 150 mA) - red	V		2.2	
Forward voltage (@ 150 mA) - amber	V		2.4	
LED junction temperature	°C			150

# FLUX CHARACTERISTICS - ML-E PARALLEL WHITE (T<sub>1</sub> = 25 °C)

The following table provides several base order codes for XLamp ML-E LEDs. It is important to note that the base order codes listed here are a subset of the total available order codes for the product family. For more order codes, as well as a complete description of the order-code nomenclature, please consult the XLamp ML-E LED Binning and Labeling document.

Color	CCT Range		Base Order Codes Minimum Luminous Flux (Im) @ 150 mA		Calculated Minimum Luminous Flux (lm)*		Order Code	
	Min.	Max.	Group	Flux (lm)	350 mA	500 mA		
Cool White	5000 K	8300 K	N2	51.7	104.8	132.9	MLEAWT-A1-0000-000451

Forward Current (mA)

#### **RELATIVE LUMINOUS FLUX VS. CURRENT - BLUE, GREEN, AMBER, RED (T<sub>1</sub> = 25 °C)**

#### **THERMAL DESIGN - ML-E PARALLEL WHITE**

The maximum forward current is determined by the thermal resistance between the LED junction and ambient. It is crucial for the end product to be designed in a manner that minimizes the thermal resistance from the solder point to ambient in order to optimize lamp life and optical characteristics.

### **TYPICAL SPATIAL DISTRIBUTION - WHITE**

## **TYPICAL SPATIAL DISTRIBUTION - ROYAL BLUE, BLUE, GREEN**

## **TYPICAL SPATIAL DISTRIBUTION - AMBER, RED**

#### **REFLOW SOLDERING CHARACTERISTICS**

In testing, Cree has found XLamp ML-E LEDs to be compatible with JEDEC J-STD-020C, using the parameters listed below. As a general guideline, Cree recommends that users follow the recommended soldering profile provided by the manufacturer of the solder paste used.

Note that this general guideline may not apply to all PCB designs and configurations of reflow soldering equipment.

#### IPC/JEDEC J-STD-020C

Profile Feature	Lead-Based Solder	Lead-Free Solder
Average Ramp-Up Rate (Ts <sub>max</sub> to Tp)	3 °C/second max.	3 °C/second max.
Preheat: Temperature Min (Ts <sub>min</sub> )	100 °C	150 °C
Preheat: Temperature Max (Ts <sub>max</sub> )	150 °C	200 °C
Preheat: Time (ts <sub>min</sub> to ts <sub>max</sub> )	60-120 seconds	60-180 seconds
Time Maintained Above: Temperature $(T_L)$	183 °C	217 °C
Time Maintained Above: Time $(t_L)$	60-150 seconds	60-150 seconds
Peak/Classification Temperature (Tp)	215 °C	260 °C
Time Within 5 °C of Actual Peak Temperature (tp)	10-30 seconds	20-40 seconds
Ramp-Down Rate	6 °C/second max.	6 °C/second max.
Time 25 °C to Peak Temperature	6 minutes max.	8 minutes max.

Note: All temperatures refer to topside of the package, measured on the package body surface.

Note: While the high reflow temperatures (above) have been approved, Cree's best practice guideline for reflow is to use as low a temperature as possible during the reflow soldering process for these LEDs.

#### NOTES

#### Lumen Maintenance Projections

Cree now uses standardized IES LM-80-08 and TM-21-11 methods for collecting long-term data and extrapolating LED lumen maintenance. For information on the specific LM-80 data sets available for this LED, refer to the public LM-80 results document at www.cree.com/xlamp app notes/LM80 results.

Please read the XLamp Long-Term Lumen Maintenance application note at www.cree.com/xlamp app notes/lumen maintenance for more details on Cree's lumen maintenance testing and forecasting. Please read the XLamp Thermal Management application note at www.cree.com/xlamp\_app\_notes/thermal\_management for details on how thermal design, ambient temperature, and drive current affect the LED junction temperature.

#### **Moisture Sensitivity**

XLamp ML-E LEDs are shipped in sealed, moisture-barrier bags (MBB) designed for long shelf life. If XLamp ML-E LEDs are exposed to moist environments after opening the MBB packaging but before soldering, damage to the LED may occur during the soldering operation. The derating table at right defines the maximum exposure time (in days) for an XLamp

Tomo	Maximum Percent Relative Humidity											
Temp.	30%	40%	50%	60%	70%	80%	90%					
35 °C	-	-	-	17	1	.5	.5					
30 °C	-	-	-	28	1	1	1					
25 ºC	-	-	-	-	2	1	1					
20 °C	-	-	-	-	2	1	1					

ML-E LED in the listed humidity and temperature conditions.

LEDs with exposure time longer than the time specified below must be baked according to the baking conditions listed below.

Cree recommends keeping XLamp LEDs in their sealed moisture-barrier packaging until immediately prior to use. Cree also recommends returning any unused LEDs to the resealable moisture-barrier bag and closing the bag immediately after use.

#### **Baking Conditions**

It is not necessary to bake all XLamp ML-E LEDs. Only the LEDs that meet all of the following criteria must be baked:

- 1. LEDs that have been removed from the original MBB packaging.
- 2. LEDs that have been exposed to a humid environment longer than listed in the Moisture Sensitivity section above.
- LEDs that have not been soldered.

LEDs should be baked at 70 °C for 24 hours. LEDs may be baked on the original reels. Remove LEDs from MBB packaging before baking. Do not bake parts at temperatures higher than 70 °C. This baking operation resets the exposure time as defined in the Moisture Sensitivity section above.

#### **Storage Conditions**

XLamp ML-E LEDs that have been removed from the original MBB packaging but not soldered should be stored in one of the following ways:

- Store the parts in a rigid metal container with a tight-fitting lid. Verify that the storage temperature is <30 °C, and place fresh desiccant and an RH indicator in the container to verify that the RH is no greater than 60%.
- Store the parts in a dry, nitrogen-purged cabinet or container that actively maintains the temperature at <30° and the RH at no greater than 60%.
- For short-term store only: LEDs can be resealed in the original MBB bag soon after opening. Fresh desiccant may be needed. Use the included humidity indicator card to verify <60% RH.

If an environment of <60% RH is not available for storage, XLamp ML-E LEDs should be baked (described above) before reflow soldering.

#### **RoHS Compliance**

The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as amended through June 8, 2011. RoHS Declarations for this product can be obtain from your Cree representative or obtained from the Product Ecology section of www.cree.com.

#### **REACh Compliance**

REACh substances of high concern (SVHCs) information is available for this product. Since the European Chemical Agency (ECHA) has published notices of their intent to frequently revise the SVHC listing for the foreseeable future, please contact a Cree representative to insure you get the most up-to-date REACh Declaration. Historical REACh banned substance information (substances restricted or banned in the EU prior to 2010) is also available upon request.

#### **UL Recognized Component**

Level 4 enclosure consideration. The LED package or a portion thereof has been investigated as a fire and electrical enclosure per ANSI/UL 8750.

#### **Vision Advisory Claim**

WARNING: Do not look at an exposed lamp in operation. Eye injury can result. See LED Eye Safety at www.cree.com/ xlamp\_app\_notes/led\_eye\_safety.

# **MECHANICAL DIMENSIONS (T<sub>A</sub> = 25 °C)**

All measurements are  $\pm$ .13 mm unless otherwise indicated.
