(*1) Inductance is measured at 1.0 MHz.

(*2) Rated current defines actual value of DC current, when temperature rise of coil becomes 40 K. (Method A)

(*3) Rated current defines actual value of DC current, when temperature rise of coil becomes 40 K. (Method B)

(*4) Reference only

(*5) Method A (PANASONIC's standard measurement conditions),

Method B (high heat dissipation measurement) is different from Method A by the measurement methods. In normal application condition, the part's temperature depends on circuit design and heat dissipation condition. This condition shall be verified by the worst operational condition.
