**DESCRIPTION**

This 200V MOSFET with a new advanced layout brings all unique advantages of MDmesh technology to lower voltages. The device exhibits worldwide lowest gate charge for any given on-resistance. Its use is therefore ideal as primary switch in isolated DC-DC converters for Telecom and Computer applications. Used in combination with secondary-side low-voltage STripFET™ products, it contributes to reducing losses and boosting efficiency. The new PowerFLAT™ package allows a significant reduction in board space without compromising performance.

**APPLICATIONS**

The MDmesh™ family is very suitable for increasing power density allowing system miniaturization and higher efficiencies.
