

5V/3.3V 1:5 Clock Distribution

General Description

The SY100EL14V is a low-skew, 1:5 clock distribution chip designed explicitly for low-skew clock distribution applications. The device can be driven by either a differential or single-ended ECL or, if positive power supplies are used, PECL input signal. The EL14V is suitable for operation in systems operating with 3.3V to 5.0V supplies. If a single-ended input is to be used, the V_{BB} output should be connected to the /CLK input and bypassed to ground via a 0.01µF capacitor. The V_{BB} output is designed to act as the switching reference for the input of the EL14V under single-ended input conditions. As a result, this pin can only source/sink up to 0.5mA of current.

The EL14V features a multiplexed clock input to allow for the distribution of a lower speed scan or test clock along with the high speed system clock. When LOW (or left open and pulled LOW by the input pull-down resistor), the SEL pin will select the differential clock input.

The common enable (/EN) is synchronous, so that the outputs will only be enabled/disable when they are already in the LOW state. This avoids any chance of generating a runt clock pulse when the device is enabled/disabled as can happen with an asynchronous control. The internal flip-flop is clocked on the falling edge of the input clock. Therefore, all associated specification limits are referenced to the negative edge of the clock input.

When both differential inputs are left open, CLK input will pull down to V_{EE} and /CLK input will bias around $V_{CC}/2$.

Datasheets and support documentation are available on Micrel's web site at: <u>www.micrel.com</u>.

Block Diagram

Micrel Inc. • 2180 Fortune Drive • San Jose, CA 95131 • USA • tel +1 (408) 944-0800 • fax + 1 (408) 474-1000 • http://www.micrel.com

Features

- 3.3V and 5V power supply options
- 70fs_{RMS} typical additive phase jitter
- Typical 30ps output-to-output skew
- Max. 50ps output-to-output skew
- Synchronous enable/disable
- Multiplexed clock input
- 75kΩ internal input pull-down resistors
- Available in 20-pin SOIC package

Applications

- Processor clock distribution
- SONET clock distribution
- Fibre Channel clock distribution
- Gigabit Ethernet clock distribution

Ordering Information⁽¹⁾

| Part Number | Package Type | Operating Range | Operating Range Package Marking | |
|--------------------------------|--------------|-----------------|---|-------------------|
| SY100EL14VZG | Z20-1 | Industrial | SY100EL14VZG with Pb-Free bar-line indicator | Pb-Free NiPdAu |
| SY100EL14VZG TR ⁽²⁾ | Z20-1 | Industrial | SY100EL14VZG with Pb-Free bar-line indicator | Pb-Free NiPdAu |

Note:

1. Contact factory for die availability. Dice are guaranteed at $T_A = 25^{\circ}C$, DC electricals only.

2. Tape and Reel.

Pin Configuration

20-Pin Narrow SOIC (Top View)

Pin Description

| Pin | Function |
|---------|----------------------------|
| CLK | Differential clock inputs |
| SCLK | Scan clock input |
| /EN | Synchronous enable |
| SEL | Clock select input |
| VBB | Reference output |
| Q0 – Q4 | Differential clock outputs |

Notes:

4. Exceeding the absolute maximum ratings may damage the device.

5. The device is not guaranteed to function outside its operating ratings.

6. In PECL mode operation, $V_{IN}(max) = V_{CC}$.

7. Parametric values specified at 100EL14V series: -3.0V to -5.5V.

8. Devices are ESD sensitive. Handling precautions are recommended. Human body model, $1.5k\Omega$ in series with 100pF.

9. Specification for packaged product only

10. $V_{IN} = V_{IH}(max)$ or $V_{IL}(min)$.

11. $V_{IN} = V_{IL}(max)$.

| | Additive Jitter | | Carrier = 156.25MHz Integration Range: 12kHz to 20MHz | | 155 | | |

Notes:

12. Skews are specified for identical LOW-to-HIGH or HIGH-to-LOW transitions.

13. The V_{CMR} range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between $V_{PP}(min)$ and 1V. The lower end of the V_{CMR} range varies 1:1 with V_{EE} . The numbers in the specification table assume a nominal V_{EE} of 3.3V. For PECL operation, the $V_{CMR}(min)$ will be fixed at 3.3V – $|V_{CMR}(min)|$.

Additive Phase Noise

 $V_{CC} = +5V, T_A = 25^{\circ}.$

Package Information⁽¹⁴⁾

MICREL, INC. 2180 FORTUNE DRIVE SAN JOSE, CA 95131 USA TEL +1 (408) 944-0800 FAX +1 (408) 474-1000 WEB http://www.micrel.com

Micrel, Inc. is a leading global manufacturer of IC solutions for the worldwide high performance linear and power, LAN, and timing & communications markets. The Company's products include advanced mixed-signal, analog & power semiconductors; high-performance communication, clock management, MEMs-based clock oscillators & crystal-less clock generators, Ethernet switches, and physical layer transceiver ICs. Company customers include leading manufacturers of enterprise, consumer, industrial, mobile, telecommunications, automotive, and computer products. Corporation headquarters and state-of-the-art wafer fabrication facilities are located in San Jose, CA, with regional sales and support offices and advanced technology design centers situated throughout the Americas, Europe, and Asia. Additionally, the Company maintains an extensive network of distributors and reps worldwide.

Micrel makes no representations or warranties with respect to the accuracy or completeness of the information furnished in this datasheet. This information is not intended as a warranty and Micrel does not assume responsibility for its use. Micrel reserves the right to change circuitry, specifications and descriptions at any time without notice. No license, whether express, implied, arising by estoppel or otherwise, to any intellectual property rights is granted by this document. Except as provided in Micrel's terms and conditions of sale for such products, Micrel assumes no liability whatsoever, and Micrel disclaims any express or implied warranty relating to the sale and/or use of Micrel products including liability or warranties relating to fitness for a particular purpose, merchantability, or infringement of any patent, copyright, or other intellectual property right.

Micrel Products are not designed or authorized for use as components in life support appliances, devices or systems where malfunction of a product can reasonably be expected to result in personal injury. Life support devices or systems are devices or systems that (a) are intended for surgical implant into the body or (b) support or sustain life, and whose failure to perform can be reasonably expected to result in a significant injury to the user. A Purchaser's use or sale of Micrel Products for use in life support appliances, devices or systems is a Purchaser's own risk and Purchaser agrees to fully indemnify Micrel for any damages resulting from such use or sale.
